

Product Features

Description: BT-2800 Bluetooth handsfree with Caller ID

Features :

Displays and announces the callers telephone number in 5-languages (English-Spanish-French-Deutsch-Italian)

Supports voice dialling

Swivel microphone

Call transfer

Mute microphone on/off

20 call memory

Upside down display selection

Volume up/down control

Firmware upgrade jack

Charging and fully charged LED indicator

Low battery indication in LCD display

Technical Specifications:

Bluetooth standard: Bluetooth v 1.2

Multi-user: Maximum 4 users

Profile: Headset and Handsfree

Frequency: 2.4 GHz

Maximum Communication Distance : 10 meters

Talk time : Up to 10 hours.

Standby time : Up to 130 Hours

Charging time : Up to 2 hours

Dimension : 153 x 60 x 30 x mm

The BT-2800 Bluetooth hands free system is compatible with all Bluetooth enabled Phones/PDAs including the ones listed below:

The future of wireless handsfree communication

Mobile Phone Laws

In Dec 2003, a new legislation came into effect to ban the use of hand-held mobile phones or similar devices when driving. The fine is currently a fixed penalty notice of £30 and up to £1000 if the case goes to court. Home office figures show, that in 2004, 74,000 fixed penalty notices were issued.

From 27th Feb 2007 the UK Road Safety Act 2006¹ will introduce a tougher penalty. Drivers now face a £60 fine and three points on their license if they are caught using their hand-held phone behind the wheel.

The Government has estimated that approximately 100,000 fixed penalty notices could be issued each year and about 5,000 prosecutions in courts as a result of the new legislation.

Points can mean substantially higher insurance costs and drivers also run the risk of losing their driving license.

You don't have to be caught many times to be disqualified. If you receive just six points in the first two years after passing your test, you will lose your license under the new Drivers Act.

The penalties for driving carelessly or dangerously when using a hand-held phone can include disqualification, a large fine and the maximum of two years imprisonment.

How does the law apply?

You will be breaking the law if you pick up or use any type of hand-held phone that is, or must be, held to operate it. This means you may not use your hand held mobile phone:

- When you are driving a vehicle
- When you are stopped at traffic lights
- When you are queuing in traffic
- To receive calls, pictures, text messages or to access the internet.

If you are an employer, you can be prosecuted if you require employees to make or receive calls when driving.

1. UK Road Safety Act 2006

Bluetooth® car-kit

If you often use your mobile phone while driving, a Bluetooth® car-kit is the hands free and wireless way to help you to stay safe and legal.

Remember, that from February 2007 there's a £60 fixed penalty and three points on your driving license for anyone caught using their mobile phone at the wheel.

What is Bluetooth®?

Bluetooth® technology allows you to use your mobile hands free because it enables your phone to wirelessly connect to your car-kit. It works by sending a secure signal of up to 10 meters between the Bluetooth® car-kit and any Bluetooth® compatible mobile phone.

This allows you to make and receive calls when you're driving more easily, safely and keeps you well within the law.

Bluetooth® car-kit advantages

Bluetooth® technology provides you with true hands free communication, without the need or fuss of unsightly cables and wires. You can also use the voice activated dialling function on your Bluetooth® mobile when using your Bluetooth® car-kit. Another unique advantage that Bluetooth® technology provides is its universal compatibility with all other Bluetooth® enabled handsets. This gives the user the freedom to upgrade their handsets without the additional cost of a new handsfree solution.

Where does the term 'Bluetooth®' originate from?

Bluetooth® was originally developed by mobile phone company Ericsson in 1994. Looking for a unique name for the technology, they settled on "Bluetooth®" after a tenth century Viking king called Harald Blatant ('Blatant' translated means 'Bluetooth®'). During his reign, he united Denmark and Norway, and was well known for his ability to help people communicate. Presumably, Ericsson's hope was that Bluetooth® technology would one day do the same.

The next generation in portable Bluetooth® hands-free solutions

With its distinctive and slick looks, the BT-2800 is an attractive solution to your hands-free requirements. Simply attach the unit to your sun visor with the bracket included, pair it with your Bluetooth® mobile phone or PDA and otherwise wasted time spent driving or queuing in traffic can be used making important business calls or chatting to friends and family.

With standby time of up to 130 hours and talk time of up to 10 hours, the BT-2800 is one of the most reliable and cost-effective hands free devices on the market. With its caller 'display/announce' feature, you'll always know who is calling before you answer and with outstanding audio quality you need never to miss another call again.

Below are just some of the unique features which make the Talktool BT-2800 hands free system the only hands free device you will ever need.

Portable

Unlike traditional hands free products that restrict the use to the car environment, the BT-2800 system gives the user total freedom of use. It can operate in any car, office and home and does not need to be installed or neither is it reliant on an external power source. Allowing the user to take the BT-2800 to wherever handsfree communication takes place. A perfect solution for drivers that use different vehicles.

Wireless Technology

Using the latest in Bluetooth® technology, the BT-2800 is a totally wireless hands free system. Other than the charger, there are no actual wires used in the operation of the device. Meaning no more unsightly wires hanging off the dashboard and therefore creating minimum fuss.

Total Recharge Function

The BT-2800 incorporates a powerful battery that is fully rechargeable. With a reliable standby time of up to 130hours and talk time of up to 10 hours the BT-2800 hands free system gives more than sufficient user time. But once the battery becomes weak, an led will light up on the main unit indicating that its time to recharge. You'll never need to be without your Talktool BT-2800 hands free system.

Universal Bluetooth® Compatibility

With its universal Bluetooth® feature the BT-2800 hands free system is unique. It works with just about every Bluetooth® enabled handset/PDA currently available. If you are constantly updating your phone then using the BT-2800 system provides an ideal cost-effective, one stop solution. Because of its universal compatibility the BT-2800 hands free system is the only hands free solution you will ever need.

Outstanding Audio Quality

Using the latest in DSP (Digital Signal Processing) and Echo Cancellation technology, the BT-2800 provides exceptional audio performance. Unlike traditional hands-free kits, the BT-2800 hands free system uses innovative 'noise suppression' technology to allow crystal clear two way communication. You will never miss another call again.
